

SUMMARY

I am a very keen, enthusiastic and motivated young professional. I particularly enjoy computer science, drama and gaming. I have worked part time in an IT service company as Quality Assurance/software testing department. Trained in different software testing techniques and types of testing with different software development models (Scrum and Kanban). Enjoyed my work during this tenure and helped find bugs in the application.

I have also volunteered at AdventureX. During my time at AdventureX, I engaged in various responsibilities that honed my organizational and interpersonal skills. As part of the team, I actively managed social media platforms, ensuring timely and engaging content to foster community engagement. Additionally, I moderated live streams, ensuring a smooth and enjoyable experience for viewers while swiftly addressing any technical issues that arose. My role also extended to directing visitors, where I provided guidance and assistance, contributing to the overall success of the event. This experience not only strengthened my ability to multitask effectively but also reinforced my commitment to teamwork and adaptability in dynamic environments.

In addition, I like and enjoy sport; both inside and outside school. Attending the gym at least three times a week has taught me skills of hard work and how dedicated I can be. Also, from my experience from drama I believe I have learnt essential skills such as: confidence, working together as a team working alongside others and developing leadership skills. These will help me in the near future and perhaps can also be useful in your company. I am very well organized and have a good record of punctuality and attendance.

EXPERIENCE

Working as a Software Trainee (Part Time) in ASKK Technologies Ltd.

- Completed Software Testing training
- Performing Manual testing
- Identifying the bugs and reporting through Jira
- Preparing the manual test scripts
- Execution of test scenarios
- Worked on Agile Software Scrum Development
